

The numbers
don't lie.

Now everyone can read them.

Velocity AI is the sports analytics platform that puts pro-grade predictive models in the hands of teams, coaches, and athletes at every level.

TERGEL • NUMAIR • PAUL • CARMEN

THE MISSION

In order to put *pro-grade sports analytics* in the hands of every coach, athlete, and analyst, not just the franchises that can afford a data-science department.

We believe the edge that decides games should be available at every level of the game.

Every front office on Earth is *quietly racing* to out-compute the next one.

A generation ago, pro scouts relied on a radar gun, a stopwatch, and a gut. Today, they're joined by neural networks that crunch thousands of variables per player per game.

But this advantage has been locked behind enterprise contracts. Velocity AI unlocks it — pro-grade models accessible to any serious team or athlete.

A *\$23 billion* industry. A wide-open door.

The global sports analytics market is valued at approximately \$5.68 billion in 2025, and is projected to exceed \$23 billion by 2033. Velocity AI is built to make that opportunity accessible.

4x

GROWTH IN EIGHT YEARS
Grand View Research • 2025

FIG. 01 • MARKET SIZE, USD BILLIONS

Growth of the global sports analytics market, 2025–2033

One platform. Five data streams. Infinite clarity.

01

Unified Dashboard

Performance stats, GPS tracking, biometrics, video analysis, and historical data — all flowing into a single interface built for real decisions.

02

Pro-Grade Models

Neural networks, decision trees, and deep learning models — the same techniques used in elite front offices, deployed through one intuitive API.

03

Human-First

Designed around a truth the best organizations know: AI alone doesn't win games. The model talks. The coach decides.

Neural networks lead the field — *and power Velocity AI.*

Across peer-reviewed sports analytics research, neural networks are the most commonly deployed AI model, followed by decision trees and random forests. Velocity AI combines all of them under a single interface.

uses neural networks — the dominant
approach

FIG. 02 • DISTRIBUTION OF AI TECHNIQUES

Five inputs, *one athlete.*

Velocity AI unifies the signals modern teams already collect — performance stats, tracking, biometrics, video, and historical data — into a single dashboard built for fast decisions.

01

Performance Statistics

goals, assists, yards

02

Player Tracking

GPS movement

03

Biometric Sensors

heart rate, workload

04

Video Analysis

computer vision

05

Historical Performance

previous seasons

The taxonomy of an AI-evaluated athlete.

FIGURE 03 • TYPES OF DATA VELOCITY AI PROCESSES IN REAL TIME

DATA TYPE	EXAMPLE	PURPOSE
Performance Statistics	goals, assists, yards	Evaluate player productivity
Player Tracking	GPS movement	Analyze positioning and speed
Biometric Data	heart rate, workload	Monitor athlete health
Video Analysis	computer vision tracking	Analyze tactics and gameplay
Historical Performance	previous seasons	Predict future performance

What AI can't do. *We'll tell you anyway.*

No sports analytics tool is magic. Velocity AI is built on honesty about its limits — because that's the only way to build trust with the people using it.

LIMITATION 01

ALGORITHMIC BIAS

LIMITATION 03

INTANGIBLE QUALITIES

LIMITATION 02

OVERFITTING

Training data has a memory — and a past.

LIMITATION 01 • ALGORITHMIC BIAS

Models trained on incomplete or biased historical data can reinforce existing inequalities in athlete evaluation. Velocity AI audits its training sets continuously.

LIMITATION 02 • OVERFITTING

Algorithms too closely tailored to historical data fail to predict future outcomes. Injuries and coaching changes don't live in spreadsheets — and we don't pretend they do.

DECISION-SUPPORT, NOT DECISION-MAKER

Velocity AI is designed as a decision-support tool — not a replacement for judgment. The model talks. The coach decides.

The qualities that win championships *still can't be measured.*

Leadership

How a player raises the performance of those around them.

Character

How a player responds under pressure, failure, and scrutiny.

Team Fit

How a player's style integrates with existing roster chemistry.

Velocity AI supports human judgment – it does not replace it.

Four people. *One mission.*

T**Tergel****Deadline Coordinator**

Oversees deadlines, tracks team progress, and ensures all tasks are completed on time. Contributes to social media posts.

N**Numair****Campaign Strategist**

Leads research and planning, ensures the campaign aligns with the proposal, and contributes to social media posts.

P**Paul****Content & Design**

Writes and edits campaign materials. Assists with infographic creation and written deliverables.

C**Carmen****Design & Media**

Creates visual deliverables — the infographic, logo, and overall design system.

The edge used to be
a secret.
Not anymore.
